ABOUT THE PROJECT

Social anxiety disorder, also known as *social phobia*, involves intense fear of certain social situations — especially situations that are unfamiliar or in which you feel you'll be watched or evaluated by others. The first sign which may indicate that some - one is suffering from social anxiety is avoiding eye contact during conversation. Videos with people avoiding eye contact or looking directly into user is the basis of this project - I wanted to make people feel awkard and uncomfortable. Depending on user's anwears, there are three different endings, which suggest that 1) there is a high probability that the user has a social anxiety, 2) it is possible that the user might has a social anxiety disorder, 3) the user needs to know more about social anxie - ty itself and about people who might be suffering from social anxiety to understand why people are not feeling comfortable and relaxed in social situations. Each time the user clicks NO somewhere during the process, it might be possible that he or she suffers from social anxiety.
